March 15th, 2020

Dear Neighbor,

We are contacting you to inform you we have filed for demolition permit for the home located at 809 E. Lake Forest. Subsequently, a new home will be built on the lot with an expanded footprint.

The demo permit has been issued by the village of WFB, De-Construction will begin in March on the interior of the home and will continue throughout the next month. Structural demo (removal of the house) will start mid April once we receive the proper notification from We energies and the Municipality that the water, sewer, gas and electrical has been disconnected and is deemed safe to proceed.

For this project, our client has opted to use an environmentally sensible alternative to traditional demolition called "deconstruction" (think *GREEN* demolition). This is a direct alternative to traditional demolition.

The deconstruction company, Recyclean, Inc., "thinks past the dumpster" by:

- **deconstructing** the property, mostly by hand, preserving most of the used building materials, appliances, historical lumber & more!
- **donating** as much of the carefully removed, sorted & packaged materials to various 501(c)3 warehouses throughout the Midwest.
- **recycling** those items that cannot be donated but can avoid the landfill.

Seymour Custom Builders has been awarded the project. Seymour Custom Builders has been building and remodeling homes since 2004. We are committed to ensuring quality work ethics and customer service. If you have any questions or concerns, please feel free to contact me:

Thank you.
